NAIROBI / AUDIT & EVIDENCE REFERENCE

Event ablation report

Published categorical outcomes for historical-event backtests.

Source and scope

This document reformats the supplied published source. Historical results and current-tense wording belong to that source context. It is not a new rerun or independent certification. People, histories and model counts are synthetic.

Read before use

Read the published scope

The report retains public findings and source context. Outcomes belong to the recorded review; this document is not a new rerun.

Public evidence boundaries

Internal identifiers, physical mappings, thresholds, calibration parameters and repair mechanics remain controlled where the published report says so. The PDF contains the supplied public report, rather than unpublished internal artifacts.

Published audit report · Read the scope with the result

Public audit view.

Release-level findings, evidence categories and outcomes are shown here. Internal identifiers, physical mappings, exact thresholds, calibration parameters, repair mechanics and orchestration remain controlled.

Audit summary

Backtest at a glance

Public event-ablation coverage and categorical outcomes.

Recorded source values
10 historical events tested
4 confirmed explanatory signals
6 other / review outcomes
2026-08-06 scope checked

Ablation outcomes

Event-by-event public status

A confirmed signal means the event improved explanatory fit in the controlled backtest. The public site deliberately avoids publishing exact error deltas or model-response trajectories.

Historical event	Public validation outcome
Fertility Decline Resumption	Confirmed explanatory signal

Historical event	Public validation outcome
Family Planning Programme Intensification	Confirmed explanatory signal
East Africa Drought	Confirmed explanatory signal
Asian Financial Crisis Impact	Confirmed explanatory signal
2007-08 Post-Election Violence	No confirmed signal in available benchmark window
COVID-19 Pandemic	No confirmed signal in available benchmark window
Structural Adjustment Programme	No confirmed signal in available benchmark window
Fertility Decline Stall	Recalibration review candidate
Post-COVID Economic Recovery	Recalibration review candidate
National Family Planning Programme Launch	Recalibration review candidate

Method boundary

Evidence is visible; calibration mechanics are not

External benchmark families, event identity and categorical validation status are public. Exact error scores, index-year selection, scenario curves, coefficients and recalibration values are part of the controlled methodology pack.

Source: release-level event-ablation validation against external fertility benchmark families. Exact scenario metrics and calibration parameters are withheld from the public website.

Keep the supporting record

Keep the applicable document version with your records. Contact Fidelra to discuss report context, source references and your intended use. Availability and rights for a paid data package are confirmed in the written quote.
