NAIROBI / AUDIT & EVIDENCE REFERENCE

Cross-domain correction audit

Published corrections and revalidation across five domain areas.

Source and scope

This document reformats the supplied published source. Historical results and current-tense wording belong to that source context. It is not a new rerun or independent certification. People, histories and model counts are synthetic.

Read before use

Read the published scope

The report retains public findings and source context. Outcomes belong to the recorded review; this document is not a new rerun.

Public evidence boundaries

Internal identifiers, physical mappings, thresholds, calibration parameters and repair mechanics remain controlled where the published report says so. The PDF contains the supplied public report, rather than unpublished internal artifacts.

Published audit report · Read the scope with the result

Public audit view.

Release-level findings, evidence categories and outcomes are shown here. Internal identifiers, physical mappings, exact thresholds, calibration parameters, repair mechanics and orchestration remain controlled.

Audit summary

Correction pass at a glance

Public release outcome after the cross-domain revalidation pass.

Recorded source values
5 domain areas reviewed
7 distinct findings closed
Release-scale affected outputs revalidated
PASS structural + realism certification

Public findings

What changed

The audit reports the semantic defect class and verified release outcome. Exact probabilities, coefficients, formulas, selection rules and object-level repair steps remain controlled.

Domain	Finding category	Public finding	Outcome
Land	Geographic valuation realism	Context was not reflected consistently	Corrected · revalidated

Domain	Finding category	Public finding	Outcome
Finance	Payment-state realism	A certification-relevant state was underrepresented	Corrected · revalidated
Fleet	Longitudinal vehicle chronology	A monotonicity edge case remained	Corrected · revalidated
Employment	Statutory wage and role diversity	Historical policy floor and role mix required refresh	Corrected · revalidated
Insurance	Claims availability	A release-availability issue surfaced during revalidation	Resolved · rechecked

Assurance

Why this matters

Cross-domain realism depends on more than passing isolated checks. A correction is only closed when the affected release is revalidated and the result remains consistent with surrounding domains.

Source: Nairobi release audit and certification evidence. Public reporting preserves issue category, scope and outcome while internal methods remains controlled.

Keep the supporting record

Keep the applicable document version with your records. Contact Fidelra to discuss report context, source references and your intended use. Availability and rights for a paid data package are confirmed in the written quote.
