NAIROBI / AUDIT & EVIDENCE REFERENCE

Temporal integrity audit

Published chronology checks across ten domain groups.

Source and scope

This document reformats the supplied published source. Historical results and current-tense wording belong to that source context. It is not a new rerun or independent certification. People, histories and model counts are synthetic.

Read before use

Read the published scope

The report retains public findings and source context. Outcomes belong to the recorded review; this document is not a new rerun.

Public evidence boundaries

Internal identifiers, physical mappings, thresholds, calibration parameters and repair mechanics remain controlled where the published report says so. The PDF contains the supplied public report, rather than unpublished internal artifacts.

FCTE · Release Integrity Audit

Published audit report · Read the scope with the result

Public audit view.

Release-level findings, evidence categories and outcomes are shown here. Internal identifiers, physical mappings, exact thresholds, calibration parameters, repair mechanics and orchestration remain controlled.

Audit summary

Integrity at a glance

The latest public revalidation state for the chronology audit.

Recorded source values
22 / 22 tracked findings at 0 live violations
10 domain groups reviewed
0 new live chronology regressions
PASS release-level revalidation

Public coverage

What the audit establishes

Checks are evaluated at the semantic relationship level: events should not precede a resident's eligible lifecycle window, extend beyond valid boundaries, or violate their own start/end ordering.

Domain group	Public check scope	Current outcome	Status
Demographics	Resident lifecycle chronology	0 live violations	PASS

Domain group	Public check scope	Current outcome	Status
Health	Care-event chronology and life-boundary consistency	0 live violations	PASS
Transport	Licensing, work and movement chronology	0 live violations	PASS
Land	Ownership chronology	0 live violations	PASS
Insurance	Chronology plus current release availability	Availability disclosed	REVIEWED

Historical defect counts and physical date mappings are retained in the controlled engineering audit pack rather than the public website.

Evidence posture

Transparent outcome, controlled internal methods

The public audit keeps the result inspectable: affected domain, type of integrity check, revalidation date and current outcome. Exact queries, field names, thresholds and correction sequences are intentionally withheld.

Source: release-level certification and audit evidence. Public reporting is intentionally semantic; Internal mapping and remediation methods are controlled.

Keep the supporting record

Keep the applicable document version with your records. Contact Fidelra to discuss report context, source references and your intended use. Availability and rights for a paid data package are confirmed in the written quote.
